**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-15 and 23-29, drawn to separate utility of multiplexing plural input channels to a common output channel having a logic for generating second data providing a quantitative measure of the performance of the statistical remultiplexer, classified in class 370, subclass 537.
  - II. Claims 16-17, drawn to separate utility of synchronizing by calculating difference of the reference clock time of the input compressed bit stream channel and the reference clock time of the output compressed bit stream channel, classified in class 370, subclass 503.
  - III. Claims 18-19, drawn to separate utility of determination of communication parameters by determining the amount of null packets present in at least a portion of an output compressed bit stream, classified in class 370, subclass 252.
  - IV. Claim 20-22, drawn to separate utility of queuing arrangement by determining one or more levels of data present in the decoder buffer model at different subsequent times within a time interval, measured from the first time, classified in class 370, subclass 412.

The above inventions are separate, distinct, and independent from each other. Neither requires other for its implementation, they have separate statuses in the art as shown by their different classification. Each invention, if allowable, would be capable of supporting a separate patent. Therefore, restriction for examination purposes is proper.

A telephone call was made to Elise Heilbrunn on 11/4/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
